- 8 Conclusion

#### Motivation

#### Research Question

- Can the common ownership cause stock return comovement ?
  - We connect stocks through the common ownership by blockholders (ownership > 1%)
  - We focus on excess return comovement for a pair of the stocks
  - We use common ownership to forecast cross-sectional variation in the realized correlation of four-factor + industry residuals

# Why does it matter?

- Covariance
  - Covariance is a key component of risk in many financial applications.
     (Portfolio selection, Risk management, Hedging and Asset pricing)
  - Covariance is a significant input in risk measurement models (Such as Value-at-Risk)
- Return predictability
  - If it's valid, we can build a profitable buy-sell strategy

### Common-ownership measurements

#### Model based measures

- HJL $_I^A(A,B) = \sum_{i \in I^A,B} \frac{\alpha_{i,B}}{\alpha_{i,A} + \alpha_{i,B}}$ Harford et al. (2011)
- Top5  $_j=\frac{1}{n-1}\sum_i^5\sum_{j\neq k}\nu_{ik}$  Antón et al. (2020)
- $\kappa_{ij} = \cos(\nu_i, \nu_j) \cdot \sqrt{\frac{IHHI_j}{IHHI_i}}$ Backus et al. (2020)
- GGL<sup>A</sup>(A, B) =  $\sum_{i=1}^{I} \alpha_{i,A} g(\beta_{i,A}) \alpha_{i,B}$ Gilje et al. (2020), Lewellen and Lewellen (2021)
- MHHI<sub>Delta</sub> =  $\sum_{j=1}^{J} \sum_{k\neq j}^{K} \frac{\sum_{i=1}^{N} w_j * w_k * \mu_{i,j} * \mu_{i,k}}{\sum_{i=1}^{N} \mu_{i,j} * \mu_{i,k}}$ Lewellen and Lowry (2021)

### Common-ownership measurements

#### Model based measures

- HJL $_I^A(A,B) = \sum_{i \in I^A,B} \frac{\alpha_{i,B}}{\alpha_{i,A} + \alpha_{i,B}}$ Harford et al. (2011)
- lacktriangledown  $\operatorname{Top5}_j = rac{1}{n-1} \sum_i^5 \sum_{j 
  eq k} 
  u_{ik}$  Antón et al. (2020)
- $\kappa_{ij} = \cos(\nu_i, \nu_j) \cdot \sqrt{\frac{IHHI_j}{IHHI_i}}$ Backus et al. (2020)
- $\mathsf{GGL}^A(A,B) = \sum_{i=1}^I \alpha_{i,A} \mathsf{g}(\beta_{i,A}) \alpha_{i,B}$ Gilje et al. (2020) , Lewellen and Lewellen (2021)
- MHHI<sub>Delta</sub> =  $\sum_{j=1}^{J} \sum_{k \neq j}^{K} \frac{\sum_{i=1}^{N} w_j * w_k * \mu_{i,j} * \mu_{i,k}}{\sum_{i=1}^{N} \mu_{i,j} * \mu_{i,k}}$ Lewellen and Lowry (2021)

#### Ad-hoc measures

- Overlap<sub>AP</sub>(A, B) =  $\sum_{i \in I^{A,B}} \alpha_{i,A} \frac{\bar{\nu}_{A}}{\bar{\nu}_{A} + \bar{\nu}_{B}} + \alpha_{i,B} \frac{\bar{\nu}_{B}}{\bar{\nu}_{A} + \bar{\nu}_{B}}$ Anton and Polk (2014)
- Overlap  $Count}(A, B) = \sum_{i \in I^{A,B}} 1$ He and Huang (2017), He et al. (2019)
- Overlap<sub>Min</sub>(A, B) =  $\sum_{i \in I^{A,B}} \min\{\alpha_{i,A}, \alpha_{i,B}\}$ Newham et al. (2018)
- Overlap<sub>HL</sub> $(A, B) = \sum_{i \in I^{A,B}} \alpha_{i,A} \times \sum_{i \in I^{A,B}} \alpha_{i,B}$ Hansen and Lott Jr (1996) , Freeman (2019)

### Common-ownership measurements

#### Model based measures

- HJL $_I^A(A,B) = \sum_{i \in I^A,B} \frac{\alpha_{i,B}}{\alpha_{i,A} + \alpha_{i,B}}$ Harford et al. (2011)
- lacktriangledown  $\operatorname{Top5}_j = rac{1}{n-1} \sum_i^5 \sum_{j 
  eq k} 
  u_{ik}$  Antón et al. (2020)
- $\kappa_{ij} = \cos(\nu_i, \nu_j) \cdot \sqrt{\frac{IHHI_j}{IHHI_i}}$ Backus et al. (2020)
- $\mathsf{GGL}^A(A,B) = \sum_{i=1}^I \alpha_{i,A} \mathsf{g}(\beta_{i,A}) \alpha_{i,B}$ Gilje et al. (2020) , Lewellen and Lewellen (2021)
- MHHI<sub>Delta</sub> =  $\sum_{j=1}^{J} \sum_{k \neq j}^{K} \frac{\sum_{i=1}^{N} w_{j} * w_{k} * \mu_{i,j} * \mu_{i,k}}{\sum_{i=1}^{N} \mu_{i,j} * \mu_{i,k}}$ Lewellen and Lowry (2021)

#### Ad-hoc measures

- Overlap\_{AP}(A, B) =  $\sum_{i \in I^{A,B}} \alpha_{i,A} \frac{\bar{\nu}_{A}}{\bar{\nu}_{A} + \bar{\nu}_{B}} + \alpha_{i,B} \frac{\bar{\nu}_{B}}{\bar{\nu}_{A} + \bar{\nu}_{B}}$ Anton and Polk (2014)
- Overlap Count  $(A, B) = \sum_{i \in I^A, B} 1$ He and Huang (2017), He et al. (2019)
- Overlap<sub>Min</sub>(A, B) =  $\sum_{i \in I^{A,B}} \min\{\alpha_{i,A}, \alpha_{i,B}\}$ Newham et al. (2018)
- Overlap<sub>HL</sub> $(A, B) = \sum_{i \in I^{A,B}} \alpha_{i,A} \times \sum_{i \in I^{A,B}} \alpha_{i,B}$ Hansen and Lott Jr (1996) , Freeman (2019)

#### Selected measure

We need a pair-level measure, which is bi-directional, so we use the AP measure.

Comovement effect

Common-ownership

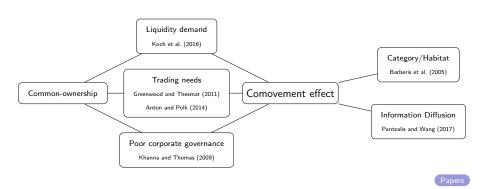

Comovement effect

Anton and Polk (2014)

$$FCAP_{ij,t} = \frac{\sum_{f=1}^{F} (S_{i,t}^{f} P_{i,t} + S_{j,t}^{f} P_{j,t})}{S_{i,t} P_{i,t} + S_{j,t} P_{j,t}}$$

#### Anton and Polk (2014)

$$FCAP_{ij,t} = \frac{\sum_{f=1}^{F} (S_{i,t}^{f} P_{i,t} + S_{j,t}^{f} P_{j,t})}{S_{i,t}P_{i,t} + S_{j,t}P_{j,t}}$$

**SQRT** 

Quadratic

$$\left[\frac{\sum_{f=1}^{F}(\sqrt{S_{i,t}^{f}P_{i,t}}+\sqrt{S_{j,t}^{f}P_{j,t}})}{\sqrt{S_{i,t}P_{i,t}}+\sqrt{S_{j,t}P_{j,t}}}\right]^{2}$$

$$\left[\frac{\sum_{f=1}^{F}(\sqrt{S_{i,t}^{f}P_{i,t}}+\sqrt{S_{j,t}^{f}P_{j,t}})}{\sqrt{S_{i,t}P_{i,t}}+\sqrt{S_{j,t}P_{j,t}}}\right]^{2}\left[\frac{\sum_{f=1}^{F}[(S_{i,t}^{f}P_{i,t})^{2}+(S_{j,t}^{f}P_{j,t})^{2}]}{(S_{i,t}P_{i,t})^{2}+(S_{j,t}P_{j,t})^{2}}\right]^{-1}$$

Anton and Polk (2014)

$$FCAP_{ij,t} = \frac{\sum_{f=1}^{F} (S_{i,t}^{f} P_{i,t} + S_{j,t}^{f} P_{j,t})}{S_{i,t}P_{i,t} + S_{j,t}P_{j,t}}$$

**SQRT** 

Quadratic

$$\frac{\left[\frac{\sum_{f=1}^{F}(\sqrt{S_{i,t}^{f}P_{i,t}}+\sqrt{S_{j,t}^{f}P_{j,t}})}{\sqrt{S_{i,t}P_{i,t}}+\sqrt{S_{j,t}P_{j,t}}}\right]^{2}}{\sqrt{S_{i,t}P_{i,t}}+\sqrt{S_{j,t}P_{j,t}}}\right]^{2}$$

$$\left[\frac{\sum_{f=1}^{F}(\sqrt{S_{i,t}^{f}P_{i,t}}+\sqrt{S_{j,t}^{f}P_{j,t}})}{\sqrt{S_{i,t}P_{i,t}}+\sqrt{S_{j,t}P_{j,t}}}\right]^{2}\left[\frac{\sum_{f=1}^{F}[(S_{i,t}^{f}P_{i,t})^{2}+(S_{j,t}^{f}P_{j,t})^{2}]}{(S_{i,t}P_{i,t})^{2}+(S_{j,t}P_{j,t})^{2}}\right]^{-1}$$

#### Intuition

If for a pair of stocks with n mutual owners, all owners have even shares of each firm's market cap, then the proposed indexes will be equal to n. Proof

| 10   | 0.62                                    | 0.25 | 0.76    | 0.34    | 0.89            | 0.42 |  |  |

#### Comparison

Comparison of two methods for calculating common ownership

#### Conclusion

We use the SQRT measure because it has an acceptable variation and has fair values at a lower level of aggregate common ownership.

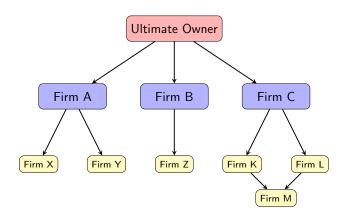

**Business Group** 

Ultimate Owner

#### Results

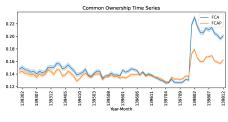

- By the proposed measurement, common ownership increases
- Common ownership is greater in pairs that are in the same business group and insutry

## Correlation Calculation

### 4 Factor + Industry

Frist Step:

Estimate each of these models on periods of three month:

• CAPM + Industry (2 Factor):

$$R_{i,t} = \alpha_i + \beta_{mkt,i} R_{M,t} + \beta_{Ind,i} R_{Ind,t} + \boxed{\varepsilon_{i,t}}$$

• 4 Factor :

$$\begin{split} R_{i,t} &= \alpha_i + \beta_{\textit{mkt},i} R_{\textit{M},t} + \\ &+ \beta_{\textit{HML},i} \textit{HML}_t + \beta_{\textit{SMB},i} \textit{SMB}_t + \beta_{\textit{UMD},i} \textit{UMD}_t + \boxed{\varepsilon_{i,t}} \end{split}$$

• 4 Factor + Industry (5 Factor) :

$$\begin{split} R_{i,t} &= \alpha_i + \beta_{\textit{mkt},i} R_{\textit{M},t} + \beta_{\textit{Ind},i} R_{\textit{Ind},t} \\ &+ \beta_{\textit{HML},i} \textit{HML}_t + \beta_{\textit{SMB},i} \textit{SMB}_t + \beta_{\textit{UMD},i} \textit{UMD}_t + \boxed{\varepsilon_{i,t}} \end{split}$$

Second Step: Calculate monthly correlation of each stock pair's daily abnormal returns (residuals)

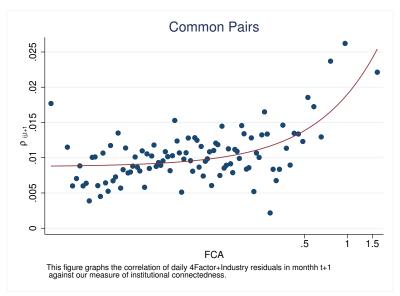

### Correlation Calculation Results

|                                  | mean  | std   | min  | 25%    | 50%   | 75%   | max |
|----------------------------------|-------|-------|------|--------|-------|-------|-----|
| CAPM + Industry                  | 0.021 | 0.200 | -1.0 | -0.047 | 0.016 | 0.084 | 1.0 |
| 4 Factor                         | 0.032 | 0.202 | -1.0 | -0.040 | 0.025 | 0.096 | 1.0 |
| 4 Factor + Industry              | 0.016 | 0.199 | -1.0 | -0.051 | 0.010 | 0.076 | 1.0 |
| 4 Factor $+$ Industry (With Lag) | 0.015 | 0.198 | -1.0 | -0.051 | 0.010 | 0.076 | 1.0 |

## Conclusion

We use the 4 Factor + Industry model to control for exposure to systematic risk because it almost captures all correlations between two firms in each pair.

### Future Correlation via FCA

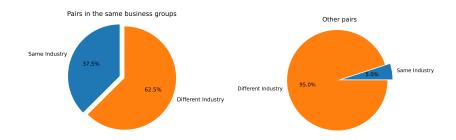

### Controls

- $oldsymbol{
  ho}_t$  : Current period correlation
- **SameGroup**: Dummy variable for whether the two stocks belong to the same business group.
- **SameIndustry**: Dummy variable for whether the two stocks belong to the same Industry.
- SameSize: The negative of absolute difference in percentile ranking of size across a pair
- SameBookToMarket : The negative of absolute difference in percentile ranking of the book to market ratio across a pair
- **CrossOwnership**: The maximum percent of cross-ownership between two firms

### Fama-MacBeth Estimation

- Fama-MacBeth regression analysis is implemented using a two-step procedure.
  - The first step is to run periodic cross-sectional regression for dependent variables using data of each period.
  - The second step is to analyze the time series of each regression coefficient to determine whether the average coefficient differs from zero.

# Fama-MacBeth (1973)

- Two Step Regression
  - First Step

$$Y_{i1} = \delta_{0,1} + \delta_{1,1}^{1} X_{i,1}^{1} + \dots + \delta_{k,1}^{k} X_{i,1}^{k} + \varepsilon_{i,1}$$

$$\vdots$$

$$Y_{iT} = \delta_{0,1} + \delta_{1,T}^{1} X_{i,T}^{1} + \dots + \delta_{k,T}^{k} X_{i,T}^{k} + \varepsilon_{i,T}$$

Second Step

$$\begin{bmatrix} \bar{Y}_1 \\ \vdots \\ \bar{Y}_T \end{bmatrix}_{T \times 1} = \begin{bmatrix} 1 & \delta_1^0 & \delta_1^1 & \dots & \delta_1^k \\ \vdots & \vdots & \vdots & \dots & \vdots \\ 1 & \delta_T^0 & \delta_T^1 & \dots & \delta_T^k \end{bmatrix}_{T \times (k+2)} \times \begin{bmatrix} \lambda \\ \lambda_0 \\ \lambda_1 \\ \vdots \\ \lambda_k \end{bmatrix}_{(k+2) \times 1}$$

• Fama-MacBeth technique was developed to account for correlation between observations on different firms in the same period

# Calculating standard errors

- In most cases, the standard errors are adjusted following Newey and West (1987).
  - Newey and West (1987) adjustment to the results of the regression produces a new standard error for the estimated mean that is adjusted for autocorrelation and heteroscedasticity.
  - Only input is the number of lags to use when performing the adjustment

$$Lag = 4(T/100)^{\frac{2}{9}}$$

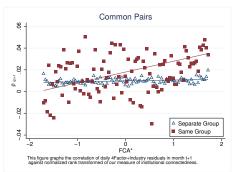

where T is the number of periods in the time series

### Future Correlation via FCA

#### Normalized Rank-Transformed

### Estimation model

Use Fama-MacBeth to estimate this model

$$\begin{split} \rho_{ij,t+1} &= \beta_0 + \beta_1 * \mathsf{FCA}^*_{ij,t} + \beta_2 * \mathsf{SameGroup}_{ij} \\ &+ \beta_3 * \mathsf{FCA}^*_{ij,t} \times \mathsf{SameGroup}_{ij} \\ &+ \sum_{k=1}^n \alpha_k * \mathsf{Control}_{ij,t} + \varepsilon_{ij,t+1} \end{split} \tag{1}$$

- Estimate the model on a monthly frequency
- Adjust standard errors by Newey and West adjustment with 4 lags  $(4(70/100)^{\frac{2}{9}}=3.69\sim4)$

- Business Group Effect
- 8 Conclusion

#### Conclusion

- We derive a measure that captures the extent of common ownership distribution.
- The common ownership comovement effect with a extra explanation:
  - Common ownership that crosses a threshold affect on comovement
  - Be in the same business group has a major effect on comovement

  - Measures' Detail

# Measuring Common Ownership

- If two stocks in pair have n mutual owner, which total market cap divides them equally, the mentioned indexes equal n.
  - Each holder owns 1/n of each firm.
  - Firm's market cap is  $\alpha_1$  and  $\alpha_2$ :
  - So for each holder of firms we have  $S_{i,t}^f P_{i,t} = \alpha_i$
  - SQRT

$$\left[\frac{\sum_{f=1}^{n} \sqrt{\alpha_1/n} + \sum_{f=1}^{n} \sqrt{\alpha_2/n}}{\sqrt{\alpha_1} + \sqrt{\alpha_2}}\right]^2 = \left[\frac{\sqrt{n}(\sqrt{\alpha_1} + \sqrt{\alpha_2})}{\sqrt{\alpha_1} + \sqrt{\alpha_2}}\right]^2 = n$$

Quadratic

$$\left[\frac{\sum_{f=1}^{n} (\alpha_1/n)^2 + \sum_{f=1}^{n} (\alpha_2/n)^2}{\alpha_1^2 + \alpha_2^2}\right]^{-1} = \left[\frac{\alpha_1^2 + \alpha_2^2}{n(\alpha_1^2 + \alpha_2^2)}\right]^{-1} = n$$

#### Table of Contents

9 Appendix

- Appendix II
  - Synchronicity and firm interlocks
  - Large controlling shareholder and stock price synchronicity
  - Connected Stocks
  - Measures' Detail

#### Main Effect

#### Common-ownership and comovement effect

[Anton and Polk (2014)]

Stocks sharing many common investors tend to comove more strongly with each other in the future than otherwise similar stocks.

#### Common-ownership and liquidity demand

[Koch et al. (2016), Pastor and Stambaugh (2003), Acharya and Pedersen (2005)] Commonality in stock liquidity is likely driven by correlated trading among a given stock's investors. Commonality in liquidity is important because it can influence expected returns

#### • Trading needs and comovement

[Greenwood and Thesmar (2011)]

If the investors of mutual funds have correlated trading needs, the stocks that are held by mutual funds can comove even without any portfolio overlap of the funds themselves

#### Stock price synchronicity and poor corporate governance

[Boubaker et al. (2014), Khanna and Thomas (2009), Morck et al. (2000)] Stock price synchronicity has been attributed to poor corporate governance and a lack of firm-level transparency. On the other hand, better law protection encourages informed trading, which facilitates the incorporation of firm-specific information into stock prices. leading to lower synchronicity

## Synchronicity and firm interlocks

JFE-2009-Khanna

- Three types of network
  - Equity network
  - ② Director network
  - Owner network
- Dependent variables

Using deterended weekly return for calculation

- **1** Pairwise returns synchronicity =  $\frac{\sum_{\mathbf{t}} (n_{i,j,\mathbf{t}}^{\text{ups}}, n_{i,j,\mathbf{t}}^{\text{down}})}{T_{i,j}}$
- 2 Correlation =  $\frac{Cov(i,j)}{\sqrt{Var(i).Var(j)}}$
- Tobit estimation of

$$f_{i,j}^d = \alpha I_{i,j} + \beta (1 * N_{i,j}) + \gamma Ind_{i,j} + \varepsilon_{i,j}$$

being in the same director network has a significant effect

# Large controlling shareholder and stock price synchronicity JBF-2014-Boubaker

Stock price synchronicity:

$$SYNCH = \log(\frac{R_{i,t}^2}{1 - R_{i,t}^2})$$

where  $R_{i,t}^2$  is the R-squared value from

$$RET_{i,w} = \alpha + \beta_1 MKRET_{w-1} + \beta_2 MKRET_w + \beta_3 INDRET_{i,w-1} + \beta_4 INDRET_{i,w} + \varepsilon_{i,w}$$

OLS estimation of

$$\begin{aligned} \textit{SYNCH}_{i,t} &= \beta_0 + \beta_1 \textit{Excess}_{i,t} + \beta_2 \textit{UCF}_{i,t} + \sum_k \beta_k \textit{Control}_{i,t}^k \\ &+ \textit{IndustryDummies} + \textit{YearDummies} + \varepsilon_{i,t} \end{aligned}$$

- Stock price synchronicity increases with excess control
- Firms with substantial excess control are more likely to experience stock price crashes

### Connected Stocks

#### JF-2014-Anton Polk

- Common active mutual fund owners
- Measuring Common Ownership

• 
$$FCAP_{ij,t} = \frac{\sum_{f=1}^{F} (S_{i,t}^{f} P_{i,t} + S_{j,t}^{f} P_{j,t})}{S_{i,t}P_{i,t} + S_{j,t}P_{j,t}}$$

- ullet Using normalized rank-transformed as  $FCAP_{ij,t}^*$
- $\rho_{ij,t}$ : within-month realized correlation of each stock pair's daily four-factor returns

0

$$ho_{ij,t+1} = a + b_f \times FCAPF_{ij,t}^* + \sum_{k=1}^{n} CONTROL_{ij,t,k} + \varepsilon_{ij,t+1}$$

Estimate these regressions monthly and report the time-series average as in Fama-MacBeth

## Commonownership measurements

#### Model-based measures

- $\mathsf{HJL}^A_I(A,B) = \sum_{i \in I^{A,B}} \frac{\alpha_{i,B}}{\alpha_{i,A} + \alpha_{i,B}}$  Harford et al. (2011)
  - Bi-directional
  - Pair-level measure of common ownership
  - Its potential impact on managerial incentives
  - Measure not necessarily increases when the relative ownership increases
  - Accounts only for an investor's relative holdings
- $\bullet \ \ \mathsf{MHHI} = \textstyle \sum_{j} \sum_{k} \mathsf{s}_{j} \mathsf{s}_{k} \frac{\sum_{i} \mu_{ij} \nu_{ik}}{\sum_{i} \mu_{ij} \nu_{ij}} \ \ \mathsf{Azar} \ \mathsf{et} \ \mathsf{al.} \ \mathsf{(2018)}$ 
  - Capture a specific type of externality
  - Measured at the industry level
  - Assumes that investors are fully informed about the externalities
- $\operatorname{\mathsf{GGL}}^A(A,B) = \sum_{i=1}^I \alpha_{i,A} g(\beta_{i,A}) \alpha_{i,B}$  Gilje et al. (2020)
  - Bi-directional
  - Less information
  - Not sensitive to the scope
  - Measure increases when the relative ownership of firm A increases

## Commonownership measurements

#### Ad hoc common ownership measures

- $Overlap_{Count}(A, B) = \sum_{i \in I^{A,B}} 1$ He and Huang (2017),He et al. (2019)
- $Overlap_{Min}(A,B) = \sum_{i \in I^{A,B}} min\{\alpha_{i,A},\alpha_{i,B}\}$ Newham et al. (2018)
- Overlap\_{AP}(A,B) =  $\sum_{i \in I^{A,B}} \alpha_{i,A} \frac{\bar{\nu}_A}{\bar{\nu}_A + \bar{\nu}_B} + \alpha_{i,B} \frac{\bar{\nu}_B}{\bar{\nu}_A + \bar{\nu}_B}$ Anton and Polk (2014)
- $Overlap_{HL}(A,B) = \sum_{i \in I^{A,B}} \alpha_{i,A} \times \sum_{i \in I^{A,B}} \alpha_{i,B}$  Hansen and Lott Jr (1996) , Freeman (2019)
- Unappealing properties
  - Unclear is whether any of these measures represents an economically meaningful measure of common ownership's impact on managerial incentives.
  - Both Overlap<sub>Count</sub> and Overlap<sub>AP</sub> are invariant to the decomposition of ownership between the two firms, which leads to some unappealing properties.
